## (54) METHOD FOR MODIFYING SURFACE OF MOLDED FLUORINE-CONTAINING ELASTOMER PRODUCT

## (57)Abstract

PURPOSE: To impart nontackiness and low friction properties to the surface of a molded product, by impregnating the surface of a vulcanized molded product of a fluorine-containing elastomer with a polyhydroxy compound and revulcanizing the resultant product.

CONSTITUTION: The surface of a vulcanized molded product of a fluorine- containing elastomer (having preferably 63W71wt.% fluorine content, 80W500ml/g intrinsic viscosity and ≤15wt.% polymer component content having ≤50,000mol.wt.) is impregnated with a solution of a polyhydroxy compound (preferably bisphenol AF) in an organic solvent (e.g. acetone) and the resultant product is revulcanized to modify the surface.

## **LEGAL STATUS**

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
